Programme Leader

Robert Shaw - is a security, intelligence and EOD executive with a UK Military background. He has broad strategic and operational experience and has advised senior staff, diplomats and government officials on aspects of security, intelligence, threat analysis, crises management, and resilience strategies. He has been the UN Security and EOD Advisor; Liaison officer for the UNMAS and UNOPS and has experience with NATO, the GCC, African Union, OSCE, EUPOL, FCO and others. Robert is a respected expert, has specialist research background on suicide bombing and has provided thematic briefs on worldwide security issues relevant to UNMAS/UNOPS missions.

Overview

You will learn about a world of espionage that will be surprising. This will motivate you to learn from case studies and practical exercises how to use Intelligence, be more aware and the building blocks for professional security framework to counter this threat to the value of the business Espionage occurs throughout the sales and supply chains and inside the crown jewels of data and intellectual property you previously thought was safe.

Skills in countering espionage are essential and constantly adapt to rapid changes in high grade technology and vulnerabilities in communications and data. Business breaches are most damaging when insiders are not detected. Cloud, web based services, mobile devices, AI and quantum computing are tools for hostile actors to exploit the company.
