Security Threat Horizon: What threat trends over the short-to-long-term will challenge our security defences and how can we prepare now?

Thursday 16 September 2021 | 17:30-21:30

Meston Suite and Churchill's Bar | The Royal Horseguards
Westminster | London

Sponsored by

SECURONIX™

About the Venue

Located along the River Thames, this Grade I listed venue, built in 1884, is bursting with character and is a wonderful backdrop for this very special CISO Dinner.

A stunning five star hotel in London, The Royal Horseguards Hotel is steeped in history, encompassing two iconic buildings: The National Liberal Club which has played host to historical icons including Churchill, Gladstone and Lloyd-George, and the club's magnificent apartments which was previously the home of the first chief of Britain's Secret Intelligence Service. Guests will enjoy Victorian grandeur combined with elegant, first class contemporary comfort.

Pre-drinks will served in the historic Churchill's Bar. With its opulent décor, where Sir Winston Churchill spent so much of his time meeting, debating and relaxing.

Security Threat Horizon: What threat trends over the short-to-long-term will challenge our security defences and how can we prepare now?

Horizon scanning can be a good technique for people to challenge assumptions and review multiple ways that events could unfurl, in order to increase the resilience and reliability of their organisations. This is not about trying to predict the future, but instead explores what the future might look like to understand uncertainties better and to analyse whether the organisation is adequately prepared for potential opportunities and threats. How can we are currently gathering, sharing, forecasting and communicating security threat horizon trends and how we can ensure that we are prepared for threats.

This Dinner Roundtable is co-chaired by a fellow CISO, hosted by Pulse Conferences and sponsored by Securonix.

This is part of a series of roundtable discussions are specifically designed for CISOs working within organisations with 5,000+ employees to benchmark experiences and the unique challenges that CISOs in Large Enterprises face.

As part of the evening discussion, Security Evangelist at **Securonix**, **Oliver Rochford** will share his top 3 predictions on the security horizon, including forecasts for living off the land techniques, future of behavioural automation and why ML Malware will relativize as a threat. **Ram Ganeshanathan**, Senior Director, Security Operations and Enterprise Security at **ARM** will also share insights on the security horizon as a practitioner responsible for everything within the SOC, all security controls, technology and the team and budget and driving a transformation programme to significantly uplift the maturity and capability of the function.

Questions that emerge will surely include:

- What scanning models are we using?
- How can we spot potential causes for uncertainty?
- What can we do to prepare now to increase our resilience to survive threats?
- How can we exploit opportunities on the security threat horizon to strengthen the business?
- What tools can we use to ensure that we are prepared for threats on the horizon?

Conducted under The Chatham House Rule, the discussions, **Clive Room**, a Director at **Pulse Conferences** will be your Master of Ceremonies for the evening. There is no cost to attend. Places around the table are limited and confirmations will be done on a 'first to confirm' basis.

We hope that you can join fellow CISOs for what promises to be a evening of fascinating discussion, a top culinary experience and fantastic company!

Yours sincerely,
Team Pulse

Insights by:

Oliver Rochford, Security Evangelist, Securonix

Oliver has worked in cybersecurity as a penetration tester, consultant, researcher, and industry analyst for over 20 years. Interviewed, cited, and quoted by media, think tanks, and academia, he has written for Security Week, CSO Online, and Dark Reading. While working at Gartner, he co-named the Security Orchestration, Automation and Response (SOAR) market, and worked on the SIEM Magic Quadrant. At Securonix, Oliver works with users on security operations and threat management topics.

Ram Ganeshanathan, Senior Director, Security Operations and Enterprise Security, ARM

Ram will share insights on the security horizon as the person responsible for everything within the SOC, all security controls, technology and the team and budget and driving a transformation programme to significantly uplift the maturity and capability of the function.

Approximate timings

17:30-18:30 Guests arrive and welcome drinks in Churchill's Bar

18:30-21:00 Discussion while dinner is served in the Meston Suite

21:00-21:30 Conclusions, goodbyes and guests depart

About Securonix

Securonix is redefining SIEM for today's hybrid cloud, data-driven enterprise. Built on big data architecture, Securonix delivers SIEM, UEBA, SOAR, Security Data Lake, NDR, and vertical-specific applications as a pure SaaS solution with unlimited scalability and no infrastructure cost. Securonix reduces noise, prioritizes high fidelity alerts, and detects and responds to advanced insider and cyber threats with behavioral analytics technology that pioneered the UEBA category.
