Connections, Consensus, Collaboration

miércoles 6 de abril | Wednesday 6 April 2022
Rosewood Villa Magna - Las Brasas de Castellana
Madrid

Invitación a cenar y colaborar

- As a CISO champion, get your DevSecOps involved in supporting security governance

- As a DevSecOps or App Sec champion, show your CISO the fast-paced world of development

Kindly Sponsored by

Contrast
SECURITY

About the Venue
Rosewood Villa Magna
Las Brasas de Castellana
Madrid

Rosewood Villa Magna is situated on the grand boulevard Paseo de la Castellana, steps from prestigious Calle Serrano with impressive architecture and minutes from Art Triangle museums. This urban oasis, surrounded by lush gardens, originally opened in 1972 and has been lovingly restored to the finest standards of modern, elegant style Reopening in 2021.

The CISO-DevOps 360 Dinner Exchanges will be hosted in a private section of Las Brasas de Castellana, an elegant and vibrant restaurant within Rosewood Villa Magna that offers a memorable culinary experience. The restaurant's cuisine focuses on local, seasonal products, while also offering a visual spectacle for guests, as the chefs cook over charcoal grills.

Rosewood Villa Magna
Paseo de la Castellana 22,
28046 Madrid, Spain

Rosewood Villa Magna - Las Brasas de Castellana - Madrid

Invitación a cenar!
CISO-DevOps 360 Dinner Exchange
Connecting CISO and DevOps

You are invited to join this evening discussion that is hosted in a private group fine-dining setting. This event is specifically designed for CISOs and heads of DevSecOps and Application Security to get to know each other and to compare their experiences with other organisations.

Co-led by a CISO, the event is hosted by Pulse Conferences and kindly sponsored by Contrast Security.

Application security is no longer one-or-two dimensional. Security teams throw several questions to DevOps teams that could slow them down, or simply annoy them enough to stop collaborating. Different motivations and priorities that typically exist between security and meeting release deadlines has led to the current narrative amongst Security teams and their DevOps team, that may go something like this: *Security people: "Those Developers are cranking out bad code that's going to get us hacked!", Developers: "Security is nothing but an obstacle. They brow beat us."*

Why Attend? Invite a Champion!
- As a RSSI / CISO, this is a unique opportunity to get your dev-ops properly involved in security supporting security governance – invite your champion to dinner directly, or Pulse is happy to invite on your behalf!
- As a DevOps champion, involve your CISO in the fast-paced world of development and be secure by design – invite your champion to dinner directly, or Pulse is happy to invite on your behalf!

Talking Points
- What are our most pressing questions and biggest pain points when dealing with DevOps/Security?
- What are we doing already and what new things may we wish to do?
- What are our recent project achievements and what positive 'outcomes' that have come out of the discussion?
- How have these mechanisms been disrupted by your agile transformation?
- How can we leverage the language and mindsets of our executives to reinforce agile initiatives?
- How do we improve our feedback loop so that security is strengthened and code release is not slowed down?

Conducted under The Chatham House Rule, we look forward to a lively discussion in Madrid where participants will share examples of Security and DevOps working closer together – the successes, challenges, pain points and solutions. A rare exchange designed to build bridges and progress projects together. Pulse Conferences will be your Master of Ceremonies for the evening.

There is no cost to attend.
Places around the table are limited and confirmations will be done on a 'first to confirm' basis.
The main discussion around the table will be in English.

These roundtables are helpful in bringing the security communities together to benchmark approaches, challenges, successes and failures in core areas of security.

We hope that you can join fellow CISOs and DevOps, engineers, software, transformation directors for what promises to be an evening of fascinating discussion and a top culinary experience!

Atentamente
Team Pulse

Approximate timings

17:30-18:30 Guests arrive and welcome drinks

18:30-21:00 Discussion while dinner is served

21:00-21:30 Conclusions, goodbyes and guests depart

About Contrast Security

Contrast Security enables developers to speed application development cycles while writing more accurate, secure code. Contrast embeds security instrumentation within software that eliminates code halts and the need for expensive security experts by automatically identifying vulnerabilities and verifying their fixes while developers write code. In doing so, Contrast observes the routes of an application while it is running, thereby exposing all of the different points of entry into the application. Delivering highly accurate and always-on protection, Contrast also eliminates time-consuming and frustrating false positives that create alert fatigue as well as false negatives that can pose serious risk to applications in runtime and moreover incur significant development time remediating. Finally, as the industry's only DevOps-native AppSec Platform, Contrast delivers comprehensive coverage from development to production, dramatically reducing the number of AppSec toolsets developers need to manage. More information can be found at www.contrastsecurity.com or by following Contrast on Twitter at @ContrastSec.

Evento gratuito para directores de seguridad y DevOps, App Sec

Larry Maccherone, DevSecOps Transformation, Contrast Security
Larry Maccherone is a thought leader on DevSecOps, Agile, and Analytics. At Comcast, Larry launched and scaled the DevSecOps Transformation program over five years. In his DevSecOps Transformation role at Contrast, he's now looking to apply what he learned to guide organizations with a framework for safely empowering development teams to take ownership of the security of their products. Larry was a founding Director at Carnegie Mellon's CyLab, researching cybersecurity and software engineering. While there, he co-led the launch of the DHS-funded Build-Security-In initiative. Larry has also served as Principal Investigator for the NSA's Code Assessment Methodology Project which wrote the book on how to evaluate application security tools, and received the Department of Energy's Los Alamos National Labs Fellow award. Looking at Larry Maccherone's career, you might think he can't figure out what he wants to be when he grows up – Serial entrepreneur? Agile transformation coach? Open-source developer? Data scientist? Dev[Sec]Ops thought leader? However, the underlying theme is that Larry has constantly been striving to create the highest performing software engineering teams. At Comcast, Larry built and scaled the DevSecOps Transformation program over five years, and he's now looking to apply what he learned doing that to help all Contrast customers and prospects. Larry hails from Raleigh, NC, where his wife and four daughters make sure there is never a dull moment!
