

CISO 360

ROUNDTABLE

Hosted by

Wednesday 11 October 2023 | 17:30-21:30
Beaumont | Lotos Room | Mayfair | London

Kindly Sponsored by

CISO 360 Roundtable LONDON

Benchmarking Threat Detection and Response in the Era of Efficiency
Are traditional SOCs too passive to stop threat actors?
Is attack disruption as the new frontier of cyber defence?
Where does it end? How can we do more with less?

The Beaumont – The Lotos Room
Brown Hart Gardens
Mayfair London W1K 6TF
www.thebeaumont.com

Closest Stations:

Bond Street: 5 minute walk

St Pancras: 10-15 minute drive

Paddington: 6-10 minute drive

Victoria: 6-10 minute drive

Superbly located on a quiet Mayfair square, The Beaumont recaptures the spirit of old-world luxury, aesthetic and values, firmly underpinned by 21st century advances in technology and ease. It is privately-owned and independently-run. Panelled in cherry and walnut wood, the private dining Lotos Room is fully furnished with leather chairs, a grand board table, vintage lighting and a bespoke Art Deco carpet. Hemingway, Fitzgerald, Martin, Sinatra and MacLaine would have felt right at home! CISO 360 Dinner Roundtable guests will be treated to a menu created by the chefs of The Beaumont's much-lauded restaurant. Retire after the dinner to Le Magritte Bar & Terrace, which belongs to the great tradition of American bars that became legendary in London and Paris during the 1920s. The Bar specialises in bourbons, American whiskies and classic cocktails, which are strictly shaken or stirred.

Wednesday 11 October | The Beaumont | Mayfair | London

Welcome to our CISO 360 Dinner Roundtable!

Benchmarking Conversation: Threat Detection and Disruption: How can we outpace cybercriminals? How can we make our businesses difficult targets?

Are traditional SOC's too passive to stop threat actors? Is attack disruption as the new frontier of cyber defence?

Led by with and for CISOs, guests will share approaches and timeframes to detect and disrupt an attacker once initial access has been achieved and debate modern SOC strategies, including assertive attack disruption and best practices in threat detection. Is there a need for a paradigm shift in the approach to cyber operations?

Join us for a thought-provoking roundtable discussion in the wonderfully luxurious private dining setting of The Beaumont's private Lotos Room.

The group discussion will explore tried and tested and innovative tools, techniques and approaches to maximize efficiency of threat detection and response to achieve more with fewer resources. We will examine the limitations and boundaries of threat detection, sharing experiences, challenges, and successes in protecting against cyber threats.

Key talking points include:

- Do we believe that traditional Security Operations Center (SOC) frameworks fall short against well-resourced, persistent threat actors? If so, why?
- Why time is of the essence in disrupting ongoing attacks, and why every second counts in minimising the potential impact of a breach
- Are there potential active response capabilities within existing infrastructures that mostly remain untapped?
- What are strategies to assertively implement attack disruption measures without impacting Business As Usual (BAU) operations?

Sponsored by e2e-assure, hosted by Pulse Conferences, we hope that you will participate in this discussion.

We invite you to join peers at the wonderful Beaumont for what promises to be a dynamic discussion, a top culinary experience and great company!

Yours sincerely,

Team Pulse

Provisional Timings

17:30-18:30
Guests arrive, welcome drinks

18:30-21:00
Discussion while dining

21:00-21:30
Conclusions and goodbyes

About e2e-assure

Our vision at e2e-assure is to provide the most advanced and effective Threat Detection & Response service in the country. We are committed to outpacing threat actors, innovating rapidly to pre-empt and disrupt their tactics and techniques. With an understanding that every organisation is at a different stage in its cybersecurity journey, we are set up to meet customers where they are with options to accelerate their security posture evolution both tactically and strategically. Our modular service portfolio provides defined detection outcomes aligned to the Mitre Att&ck framework and offers targeted attack disruption and active response, ensuring our customers are always one step ahead of potential threats. Our approach to safeguarding clients is proactive and immediate. We actively respond to critical alerts with immediate containment actions, ensuring that businesses remain secure, resilient, and prosperous.

About Your Co-Chair

Rob Demain, Founder and CEO, e2e-assure

Rob started e2-assure after realising that the traditional delivery model for Security Operations Centres (SOCs), focused on technology over people and processes, wasn't working. Organisations were struggling to resource their teams, struggling to deploy, onboard, and tune their SIEM tools, and as a result, failing to build an effective security operation. Nearly 10 years on, e2e-assure is a thriving intelligence-led threat detection and response SOC that focuses on working with its customers and partners to deliver effective, 24/7/365 security operations.
